

COINSEVEN

The Epitome of Low-Quality Memes

White Paper

Introduction

In a world filled with overhyped cryptocurrencies promising the moon and stars, we present to you a token that makes no promises whatsoever. Join us on a journey of low-quality memes, absolute nonsense and certainly no mind-blowing technology just memes of questionable quality.

Vision

Our vision is simple – to provide the crypto community with a dose of humor, a whole lot of nothing and create a community of #memellionaires who appreciate the beauty of terrible humor.

Token Overview

Coinseven operates on the BNB Smart Chain, utilizing the least advanced technology available. No fancy algorithms, no groundbreaking innovations and definitely no fancy economic models.

Roadmap

We don't believe in roadmaps because, let's face it, we have no idea where we're going with this. However, here are a few potential milestones:

LAUNCH AND PRAY

We launched Coinseven without a plan. Pray for us.

1

EXIST

Our main goal in this phase is to simply exist.

2

PARTNERSHIPS

Develop partnerships with other useless projects on the blockchain.

3

CEX LISTING

Highly unlikely but get listed on obscure exchanges that no one uses.

4

WHO KNOWS?

The future is uncertain, and so is Coinseven's roadmap but we aim to achieve world domination through the power of memes.

5

Tokenomics

No white paper is truly complete without the mandatory 'funky graphs to make you look smarter' section. Let's keep it real, we've got tokenomics that would make other projects jealous – yes, even the 'serious' ones. And guess what? We're not just bringing you top-notch tokenomics, but our meme potential is so off the charts, it's practically in orbit!

Token Total Supply 7,777,777,777,777

Token Bounty

70% of the total supply will be made available to the public through the token bounty hunting event which is our token faucet available on coinseven.vip

Liquidity

Allocating 23% of the token supply to provide liquidity to the token. Liquidity is crucial for the functioning of a token in decentralized exchanges (DEXs) and facilitates trading.

CEX Listings

The 7% allocated for CEX listings aims to expand coinseven's reach, enhance liquidity, and gain recognition within the broader cryptocurrency ecosystem.

Token Utility

Cryptocurrency markets have witnessed a surge in meme coins, often lacking real-world applications or utilities beyond speculative trading. However, Coinseven aims to revolutionize the meme coin landscape by introducing a sh!t token with not just one or two but seven epic loads of sh!t use cases.

- **Sh!t #1: Token Bounty Hunting**

Facilitates distribution of 70% of coinseven's total supply to the public.

- **Sh!t #2: NFTs**

Minting 7,777 NFTs on the BNB Smart Chain that form an integral part of the Coinseven ecosystem.

- **Sh!t #3: NFT Raffles**

Host raffles for major NFTs, where \$SEVEN tokens serve as the currency for purchasing raffle tickets.

- **Sh!t #4: Lottery & NFT Bounty**

Allocates 100% of the \$SEVEN tokens collected from ticket sales into the prize pool, with 80% dedicated to the lottery pool and 20% to the bounty pool. Participation in the bounty pool is exclusively reserved for NFT holders who purchased tickets for that round.

- **Sh!t #5, #6 and #7: To be Announced**

Exciting functionalities and sh!t utility to be announced soon.

Community Engagement

Join our [Telegram](#) for more emojis than words and [X \(Formally Twitter\)](#) for memes that will make you question your life choices. Share your favorite low-quality memes and speculate on the non-existent future of Coinseven.

Conclusion

In a world where everyone is trying to change the game, we proudly present a coin that doesn't even bother playing it. Coinseven is the epitome of uselessness where the only thing we take seriously is not taking anything seriously and we invite you to join us on this meaningless journey.
